

The Integra Database Explorer is an integrated data and application drilldown component that facilitates navigation and data access within the Integra environment.

The Database Explorer allows any authorized user to utilize a standard tree-view interface to specify what type of data or information they wish to view and with the intuitive mouse driven interface drilldown to almost any information contained within Integra's integrated database.

## Features and Benefits

- Management Inquiry tool
- Useable by Casual Users
- Point & Click Interface
- No Training Required
- Easy Intuitive Interface
- Integrated Query
- Integrated Security Controls

## Overview

The Integra Database Explorer is a management query and database drilldown tool that facilitates information access within the Integra environment. Similar to the Microsoft Windows™ Explorer and using point and click technology, any user with proper access permission can easily locate almost any data from Integra's integrated database.

You no longer need to know how the data is organized or where in the menus the data is located. Instead, you specify what information you want to see and Integra activates the appropriate inquiry dialog and presents the information for you. You may then further query or drill down into the data and with proper access permission you may even perform dataset maintenance and updates.

Contact our marketing or support team to see how easily Integra's advanced easy to use query capabilities can be put to work for you and your organization.
