

The Integra Microsoft Excel™ Query Manager Add-In provides a powerful data extraction and data mapping tool for Excel Spreadsheet users.

The Add-In leverages the power and functionality of the Integra Query Manager from within an Excel Spreadsheet and provides you configurable data mapping controls to automate the population of your spreadsheet Rows, Columns and Individual Cells with Integra Query data.

The Add-In makes available any and all data from the Integra Energy Management System Database via the easy to use Excel Spreadsheet interface and brings to bear the power of Excel via formulas, pivot tables, charting and more.

Features and Benefits

User Login & Data Security

Integra Query Manager Integration
Supports Query Data Selectors
Supports Query Parameter Prompts
Supports Query Date Selectors
Configurable Data Mapping Rules

Supports Row Level Mapping
Supports Column Level Mapping
Supports Individual Cell Mapping
Cell Mapping via Query Formula
Supports Row Mapping via Data Keys
Supports Named Columns Mapping
Supports Multiple Worksheets

Register via Excel Add-In Wizard
Integrates into Excel Menus
User Worksheet Formatting
Supports Excel Formulas
Supports Excel Pivot Tables
Supports Excel Charting

Supports Multiple Query Datasets
Support Queries and Sub-Queries

Overview

Integra's Microsoft Excel™ Query Manager Add-In allows you to retrieve Integra data and to specify data mapping criteria for inserting all or selected data into your Excel spreadsheets.

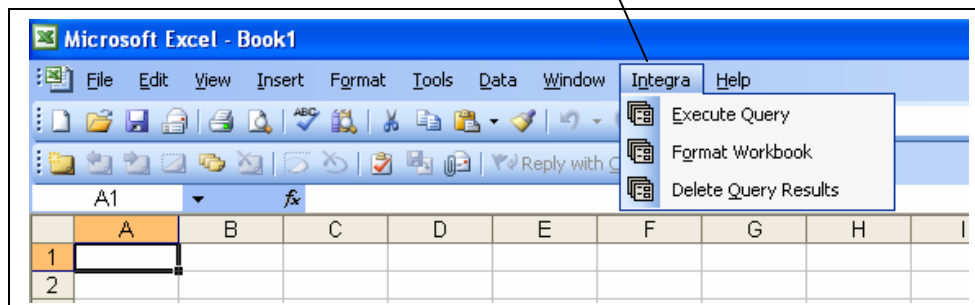

By integrating with the Integra Query Manager, the Integra Excel Add-In is able to extract any data from the Integra Energy Management System's Databases for inclusion into an Excel spreadsheet and facilitates dynamic updating of user formatted spreadsheets with Integra data.

The Add-In provides user configurable data mapping parameters and rules to control mapping Integra data into Columns, Rows or Individual Cells of your spreadsheet. Full support for Excel functionality on the inserted data is provided via user formulas, pivot tables, charting, printing and more.

The Add-In provides multiple data mapping methods including a powerful "By Row Keys" method that automatically matches your Spreadsheet Rows to Query Data Rows and populates the Query Data into the proper spreadsheet columns and rows.

The add-In integrates into the standard Excel menus to provide you with "Integra" options for Executing an Integra Query, Mapping Query Data into your spreadsheet and for Removing temporary Query Datasets.

Add-In Integrates into your Excel workbook to provide user control for Query Execution and Data Mapping.
