Database Explorer
Database Engine
License Manager
Session Manager
Security Manager
Company Manager

Editions

Workstation Edition
Workgroup Edition
Network Edition
Enterprise Edition

The Solution

The Integra Drilling Company Solution provides drilling and work-over rig companies with an integrated suite of software components to manage the accounting and reporting needs of their organization. Integra is a configurable software system designed to meet the needs of small independent drilling companies as well as enterprise-class organizations. Integra's scalable database architecture is offered in four editions that can meet the needs of one to hundreds of concurrent users with local and remote site processing.

Solution Overview

The integrated nature of the Integra solution components allows our clients to configure a software solution to meet their individual needs and to enhance their solution as needs change. Efficient data entry allowing user sensitive screen configurations supports rapid entry of accounting transaction data. Integra provides integrated rig payroll support and efficient entry of payroll information with rig and drilling well allocation of payroll and burden costs. Flexible employee pay rate management by task and automatic overtime computation and allocation to drilling wells is included. Rig expense allocations are included to allocate monthly rig costs to each well based on rig days or based on drilled wells direct costs as a basis. Integra's integrated Database Explorer provides a unique management tool with drill-down capability to all master database and historical information retained by the system. Support document imaging, data exchange interfaces and electronic funds transfer add significant capabilities to your company's information infrastructure.
