Editions

Workstation Edition
Workgroup Edition
Network Edition
Enterprise Edition

The Solution

The Integra Non-Operated Property Solution provides oil and gas royalty and working interest owners and investors with an integrated suite of software components to manage the accounting and reporting needs of their organization. Integra is a configurable software system designed to meet the needs of individual royalty and working interest owners, royalty & working interest ownership management companies, institutional investors and trusts. Integra's scalable database architecture is offered in four editions that can meet the needs of one to hundreds of concurrent users.

Solution Overview

The integrated nature of the Integra solution components allows our clients to configure a software solution to meet their individual needs and to enhance their solution as needs change. Keyboard revenue check stub entry with purchaser-specific data entry screen configurations supports rapid entry and validation of line item revenue detail. Joint Interest entry provides net or gross side expense entry with 8/8 billing expense detail tracking and reporting for non-operated interests. The industry recognized Cdex & Jibe Interface components provides an eCommerce alternative to manual heads-down data entry of revenue and expense line item detail. Comprehensive property, general ledger and financial reporting components support company and property management information reporting needs. Integra's industry standard financial and depletion reporting provides your accounting staff and CPA firm with information in an easy to use format.
